Inventory Management and Purchase Order System

SOLUTION OVERVIEW

SOLUTION OVERVIEW

If you are a growth oriented business that desire to thrive, the next logical step is implementing TigernixERP's Inventory Management and Purchase Order System which encompasses the perfect inventory management toolkit to trigger that growth. By deploying this Inventory Management and Purchase Order system, you are not just automating the functions of your warehouse but adding a new dimension to the business; meaning, with this, you enables effective tracking of inventory and all the other functions of stores throughout the distribution chain, exactly from receipt to invoicing.

This module of TigernixERP helps your business maintain your warehouses properly. Now you can save the money once wasted on inventory when you did not have a modern inventory management system. With its wide range of inbuilt options, the efficiency of handling stocks and purchase order in warehouse management is now simple.

ADVANTAGES

TigernixERP's Inventory Management and Purchase Order System is an all-in-one warehouse management software solution that assists you in streamlining the standard warehouse management process. With user-friendly solution which has the ability to manage the supply chain strategy effectively, you can simply control all the movements and storage of stocks within the warehouse without any hassle.

Save money and time with automation

Having to deal with hundreds or sometimes thousands of purchase orders manually is quite expensive, time-consuming and of course prone to human errors like inputting mistakes and loss of physical documents. In addition, the typical paper documents require a substantial costly offsite storage which is difficult with limited space availability. All these drawbacks of traditional purchase order systems can be overcome with TigernixERP's Inventory Management and Purchase Order module.

Effective Purchase Requisitions Management

With this module now your Purchase Requisitions Management process can embrace automation minimizing paperwork. This enables your users to choose products from your catalogue directly, or alter descriptions while assisting you to digitalize the order collection, bids, quotations and order process. With this module of TigernixERP, purchase requisitions can be developed for materials, products, packaging supplies and different services from one or varied facilities.

Order Management System

This order management option provides one centralized hub to manage orders from all sales channels of the business. Presenting you a base for persistent and seamless implementation across all customers, stock and supply chain touch points, this module enhances the customer satisfaction, retention and lasting loyalty. TigernixERP's order management mechanism is an effective automated system that seamlessly orchestrates the accomplishment of products across all your customer segments virtually.

Integration with Accounting Software

Accounting and bookkeeping are an integral part of successful inventory and purchase order management. Integrating your Inventory Management and Purchase Order System with your existing business accounting software, the software enables you to record stock counts, value inventory, determine EOQ and other stock levels easily including reordering quantity with the assistance of the accounting software.
