

TigernixETRM

Energy Trading and Risk Management System

SOLUTION OVERVIEW

SOLUTION OVERVIEW

Tigernix's Energy Trading and Risk Management software (ETRM) is a versatile, fully-integrated platform for all ranges of products including power, coal, natural gas, and more. The software covers every phase of a transaction lifecycle such as risk management, processing, trading, scheduling, accounting and logistics.

With the understanding that trading processes are subject to risks and market fluctuations, TigernixETRM is built to stand the test of time. This ETRM also helps you manage events that could be supply demand fluctuations, disruptive events or economic environment changes.

Commodities trade has to be handled in a very different way than a standard ordering mechanism, involving risk management at a higher prominence. The goal here is to help companies achieve stability in commodity purchasing and minimize the price by using innovative ways and with active risk management.

Part of the value proposition in commodities domain is also to automate the implement effective and efficient business processes for organizations to be nimble and create business handling capacity.

ADVANTAGES

TigernixETRM is sophisticated and all-encompassing, that caters to the complex commodity business and risk management.

Gain time and value instantly

Time, in this business, is more precious than anything. TigernixETRM saves your time largely with its quick implementation and helping you gain immediate value from the solution with pre-designed and pre-configured workflow templates.

Increase your demand in real-time

The real-time tracking of transportation and logistics is a boon to this industry. TigernixETRM helps you view and track vehicles in real-time and manage the demand and supply. This puts you ahead of every other business and helps you increase your demand quickly. When your demand increases, a lucrative ROI is not a dream.

Smart business with smart analytics

TigernixETRM provides a smart analytics tools for you to generate as many reports as possible, with as many filters as you need. This is an added advantage for you to analyse the market requirement and address the need accordingly.
